

The major decisions I made are as followed:

- Region control: All countries attributed to a region, Europe split into sections
- Missing Customer_ID: Replace with No_ID. Keep all sales data, string ID has no effect
- Removed data: Cancellations, duplicates, non-purchases removed for clean sales data
- Graph choices: Monthly revenue and top sellers are likely most important to visualize

The major removals that are subject to question are explained in the report. These include cancellations, duplicates, non-purchases, and bad price or bad quantity rows.
